

The Lonate platform is decentralized and provides a transparent lottery-donation blockchain ecosystem. Loty Token provides its own economic model through the virtuous circle structure of Lonation - Donation - Distribution in eco system composed of User, Builder and Executant. This ecosystems provide fair game rules and track the entire process of donation. It helps raise trust and accessibility for the public and contributes to the creation of a donation.

Lonate commits to the establishment of a fair and innovative future-giving culture by sharing the pleasures of donations (public interests) and lotteries (private interests).

Why Lonate

The Lonate platform utilizes the blockchain to solve the ambiguous structural problems of the existing donation environment and lottery industry. Also, you can check a fair lottery method through HMN, and the flow of funds such as lottery money and the amount of donations transparently through the blockchain-based Smart Contract. Thus, it is available to solve the structural problems of the two sectors with a blockchain. Lottery tickets generally show a high participation rate of people through strong motivation of the lottery prize money. On the other hand, it is not difficult for people to make a donation, but donation participation is relatively low. This is because people who have no experience in donation have not been motivated due to the fact that they have not felt the sense of accomplishment or satisfaction of the donation.

The Lonate platform naturally induces the selection of beneficiaries from the donation at the same time when participating in the lottery and provides the donation process and results in real time, so that it motivates participants about the donation through the sense of accomplishment and satisfaction of them. It also raises the donation participation rate and activates the donation market while encouraging user participation through rewards from various donation projects proposals, voting for project consistency, and compensation for project performance. This eventually leads to a variety of donation projects, which are very helpful in promoting active charitable projects.

What is Lonate

User(Lonator) can participate in the game with the Loty token as a ticket. They can donate some of their ticket sales to their chosen foundation or project. In addition, they can donate the full amount without participating in the game. Targets for the donation can be requested by unspecified individuals participating in the platform and can be selected by agreement between the communities. Once the fund-raising is complete, the company that will carry out donation activities transparently will be determined, and the collection will be delivered to beneficiaries for the donation in a variety of forms according to the purpose of the donation. These donation and lottery winning processes are transparently open to all participants through a blockchain technology.

Roles

User
(Lonator)

- Participation in the Lonate game
- When user win the lottery, s/he can get the Jackpot.
- Selection of targets to be donated
- Confirmation of donation results

Project
Builders

- Request of donation projects
- Token compensation at the time of completing the fund-raising of projects

Project
Executant

- Request for performing donation projects
- Token compensation at the time of the completion of executing projects

Features

Transparency

You can see all the processed that occur on that Lonate platform, such as transactions, winning, donation, etc

Fairness

The decision making to select targets to be donated is made by voting of users with Loty tokens.

Accessibility

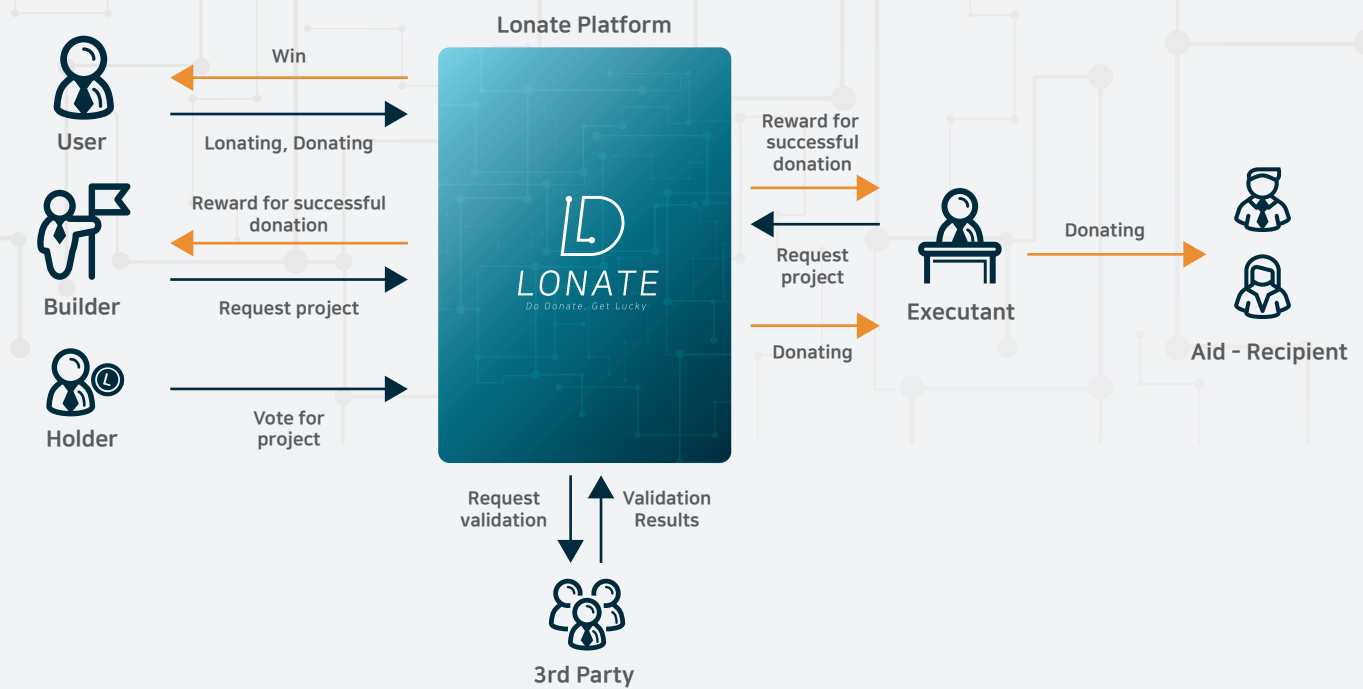

It allows you to choose targets for the donation and increase your accessibility to the donation through the

Ecosystem

It links a business requesting the donation project with a business performing it and then gives you a compensation.

How it works

Token Sale

- Token : Loty (ERC-20 Token)
 - Total Supply : 1,000,000,000 Loty
 - Token Value : 1 Loty = 0.06 USD
 - Soft Cap : 3,000,000 USD
 - Hard Cap : 24,000,000 USD
 - 1st Pre Sale : +30% Bonus
 - 2nd Pre Sale : +20% Bonus
- All Unsold token will be burned
